

Development, Environment and Policy

Develop a wide range of interdisciplinary skills, and above all, learn how to apply them where they matter most.

Sustainable development. Environmental impact. Poverty on an immense scale. These are some of the most pressing issues facing the world today – and the solutions to them are far from simple. Ethical, political, economic, social, and technical pressures interrelate and underpin these complex challenges. At SOAS, we look to help navigate the consequences of these global problems – and ultimately, explore effective ways of tackling them.

Our range of postgraduate qualifications in this area is unique, covering subjects that include sustainable development, poverty reduction, environmental management, water, forestry, climate, agricultural production, biodiversity, conflicts, and energy supply. Our academic staff are also second to none. Your teaching team will have extensive international experience in research, which is published and shared globally with other key academics, decision makers and policy formers.

Courses:

- MSc/PGDip/PGCert Climate Change and Development (Online)
- MSc/PGDip/PGCert Sustainable Development (Online)
- MPhil/PhD in Development, Environment and Policy

Duration:

- 2 years
