

Economics

Gain a well-rounded education that applies economics to real-world issues, reflects real policy concerns, and has real value.

This is economics as you've never seen it before. Modern economics can't be understood in the context of today's complex world without first fully understanding the historic and political economy. At SOAS, you'll gain this deep understanding – and the most rounded education in economics you possibly can.

We also have a vibrant research culture, covering a wide range of issues – and focusing on an unparalleled range of countries and regions. Specialising in studying developing and emerging economies, we offer a pluralist and applied approach to the study of economics. As our research strengths are also recognised internationally, we've received large amounts of funding for our research activities from a broad range of organisations. For you, that means plenty of opportunities to assist academic staff or develop your own cutting-edge research.

We believe that the study of economics should be rigorous, reflective, and ultimately, useful. At SOAS, you'll be encouraged to explore the economic impact of some of the world's biggest challenges – and equipped to help tackle them.
